

Workplace Spill Management

UNIT STANDARD: N/A

Outline

This course will equip students with a basic understanding of what to do when faced with an unexpected spillage of a hazardous substance.

This course has been designed for:

- 👤 Safety officers, site supervisors, and workers involved in industries where the potential exists for an unintended spill of a hazardous substance.
- 👤 These sectors include but are not limited to construction, mining, petrochemical, and confined space operations.
- 👤 Ideal candidates are those who would need to initiate the spill response process.

Objectives

On completion of the course, students will:

- + Have a basic understanding of hazardous substances, their properties and potential impact on workers and the environment.
- + Be able to demonstrate knowledge of where to get information regarding hazardous substances particularly with regards to unintended release. This will include the use of labels, GHS, safety data sheets, signage etc.
- + Have taken part in a simulated spill and respond in a safe and appropriate manner.
- + Know how to report the incident to the appropriate authorities following company specific procedures.
